Abstract

Here is an instruction how to use the files:

1. Download two files: `abstr.cls` and `abstr_plen.tex` to the same directory on your computer. $\mathcal{AMS}$-LaTeX packages `amssymb`, `amsfonts`, `amsmath` are automatically preloaded. No need to declare them! Do not use any other packages except absolutely required.

2. Open `abstr_plen.tex` file in your favourite TeX-editor. Save it as `lastname_abstr_plen.tex`.

3. Required fields:
   In the appropriate fields provide title, your first and last name, e-mail, affiliation (name of an institution), AMS Subject Classification symbol.

4. Optional fields:
   AMS Secondary classification and names of the coauthors, fill out and uncomment, if needed.

5. It is highly recommended to avoid:
   - unnecessary line breaks,
   - long, complicated mathematical formulas and diagrams,
   - changing font type or font size in text,
   - references.

6. Abstract length should range from the 'T'-markers on sides to the 'L'-markers below.

AMS Classification: 01A61.
